### IN THE CLAIMS

Please amend claims 1, 7, 24 and 32 as follows.

1. (Currently amended) A device for collecting blood from and administering medical fluids to a patient, comprising:

a main tubing segment for conveying the blood and the medical fluids;  
an indicator unit and a syringe port disposed in fluid communication with said main tubing segment in branched relationship to said main tubing segment and each other, said indicator unit adapted for indicating blood content;  
a clamp operably engaging said main tubing segment ~~for selectively blocking~~ and adapted to selectively block and unblock said main tubing segment; and  
at least one air-permeable membrane provided in said indicator unit.

2. (Original) The device of claim 1 further comprising a blood volumeter provided in said indicator unit.

3. (Original) The device of claim 1 wherein said indicator unit is disposed in removable fluid communication with said main tubing segment.

4. (Original) The device of claim 3 further comprising a blood volumeter

Applicant: Patrice Flaherty  
Application No: 10/630,402  
Filing Date: 07/30/2003  
Attorney Docket No: 1066

---

provided in said indicator unit.

5. (Previously presented) The device of claim 2 wherein said blood volumeter is a volumeter chamber.

6. (Original) The device of claim 5 wherein said indicator unit is disposed in removable fluid communication with said main tubing segment.

7. (Currently amended) A device for collecting blood from and administering medical fluids to a patient, comprising:

a main tubing segment for conveying the blood and the medical fluids;

an indicator unit and a syringe port disposed in fluid communication with said main tubing segment in branched relationship to each other, said indicator unit adapted for indicating blood content;

a clamp operably engaging said main tubing segment for selectively blocking said main tubing segment; and

at least one air-permeable and liquid-impermeable membrane provided in said indicator unit at a distal end of said indicator unit.

8. (Original) The device of claim 7 further comprising a blood volumeter

Applicant: Patrice Flaherty  
Application No: 10/630,402  
Filing Date: 07/30/2003  
Attorney Docket No: 1066

---

provided in said indicator unit.

9. (Original) The device of claim 7 wherein said indicator unit is disposed in removable fluid communication with said main tubing segment.

10. (Previously presented) The device of claim 8 wherein said blood volumeter is a volumeter chamber.

11. (Original) The device of claim 10 wherein said indicator unit is disposed in removable fluid communication with said main tubing segment.

12. (Withdrawn) A device for collecting blood from and administering medical fluids to a patient, comprising:

a main tubing segment for conveying the blood and the medical fluids;

an indicator unit and a syringe port disposed in fluid communication with said main tubing segment in branched relationship to each other, said indicator unit adapted for indicating blood content;

a blood reservoir provided in fluid communication with said indicator unit; and

Applicant: Patrice Flaherty  
Application No: 10/630,402  
Filing Date: 07/30/2003  
Attorney Docket No: 1066

---

a clamp operably engaging said main tubing segment for selectively  
blocking said main tubing segment.

13. (Withdrawn) The device of claim 12 further comprising a blood  
volumeter provided in said indicator unit.

14. (Withdrawn) The device of claim 12 wherein said indicator unit is  
disposed in removable fluid communication with said main tubing segment.

15. (Withdrawn) The device of claim 13 wherein said blood volumeter is a  
spiral tubing volumeter, a folded tubing volumeter or a volumeter chamber.

16. (Withdrawn) The device of claim 12 further comprising a protective  
container provided in fluid communication with said indicator unit and wherein said  
blood reservoir is contained in said protective container.

17. (Withdrawn) A device for collecting blood from and administering  
medical fluids to a patient, comprising:

a main tubing segment for conveying the blood and the medical fluids;  
an indicator unit and a first syringe port disposed in fluid

Applicant: Patrice Flaherty  
Application No: 10/630,402  
Filing Date: 07/30/2003  
Attorney Docket No: 1066

---

communication with said main tubing segment in branched relationship to each other,  
said indicator unit adapted for indicating blood content;

a second syringe port provided in fluid communication with said  
indicator unit; and

a clamp operably engaging said main tubing segment for selectively  
blocking said main tubing segment.

18. (Withdrawn) The device of claim 17 further comprising a cap device for  
removably engaging and sealing said second syringe port and an air-permeable  
membrane carried by said cap device.

19. (Withdrawn) The device of claim 17 further comprising a blood  
volumeter provided in said indicator unit.

20. (Withdrawn) The device of claim 19 wherein said blood volumeter is a  
spiral tubing volumeter, a folded tubing volumeter or a volumeter chamber.

21. (Withdrawn) A device for collecting blood from and administering  
medical fluids to a patient, comprising:

a main tubing segment for conveying the blood and the medical fluid;;

Applicant: Patrice Flaherty  
Application No: 10/630,402  
Filing Date: 07/30/2003  
Attorney Docket No: 1066

---

a syringe port provided in fluid communication with said main tubing segment;

an expandible blood receptacle for removably engaging said syringe port in fluid communication with said main tubing segment; and

a clamp operably engaging said main tubing segment for selectively blocking said main tubing segment.

22. (Withdrawn) The device of claim 21 further comprising a blood volumeter provided in fluid communication with said main tubing segment.

23. (Withdrawn) The device of claim 21 further comprising a second syringe port provided in fluid communication with said main tubing segment and wherein said syringe port and said second syringe port branch separately from said main tubing segment.

24. (Currently amended) A device for collecting blood from and administering medical fluids to a patient, comprising:

a main tubing segment for conveying the blood and the medical fluids;

an indicator unit and a port disposed in fluid communication with said

Applicant: Patrice Flaherty  
Application No: 10/630,402  
Filing Date: 07/30/2003  
Attorney Docket No: 1066

---

main tubing segment in branched relationship to said main tubing segment and each other, said indicator unit having a blood volumeter adapted for indicating blood content;

a clamp operably engaging said main tubing segment ~~for selectively blocking and adapted to selectively block and unblock~~ said main tubing segment; and

at least one air-permeable membrane provided in said indicator unit in fluid communication with said blood volumeter, said blood volumeter disposed between said main tubing segment and said at least one air-permeable membrane.

25. (Previously presented) The device of claim 24 further comprising a connector provided in fluid communication with said main tubing segment and wherein said indicator unit is disposed in removable fluid communication with said connector.

26. (Previously presented) The device of claim 24 wherein said blood volumeter is a volumeter chamber.

27. (Previously presented) The device of claim 24 further comprising a collector conduit provided in fluid communication with said main tubing segment and wherein said indicator unit is disposed in fluid communication with said

Applicant: Patrice Flaherty  
Application No: 10/630,402  
Filing Date: 07/30/2003  
Attorney Docket No: 1066

---

collector conduit.

28. (Previously presented) The device of claim 27 wherein said indicator unit comprises a volumeter conduit provided in fluid communication with said collector conduit and wherein said blood volumeter is provided in fluid communication with said volumeter conduit.

29. (Previously presented) The device of claim 28 further comprising a port disposed between said collector conduit and said volumeter conduit.

30. (Previously presented) The device of claim 24 further comprising a syringe tubing segment provided in fluid communication with said main tubing segment and wherein said port is provided on said syringe tubing segment.

31. (Previously presented) The device of claim 24 further comprising a connector provided in said main tubing segment between said clamp and said indicator unit and said port.

32. (Currently amended) The device of claim 1 further comprising a port ~~provided in fluid communication with said indicator unit, an attachment sleeve~~

Applicant: Patrice Flaherty  
Application No: 10/630,402  
Filing Date: 07/30/2003  
Attorney Docket No: 1066

---

~~provided in fluid communication with said port and a blood receptacle provided in~~  
~~fluid communication with said attachment sleeve~~ tubing bifurcation having a syringe  
leg and a collector tubing leg communicating with said main tubing segment and  
wherein said syringe port communicates with said syringe leg and said indicator unit  
communicates with said collector tubing leg.
